□□ BROski Bot v3.0 - Neurodivergent-First Discord Automation

Built by neurodivergent minds, for neurodivergent minds. A Discord bot that removes friction, reduces anxiety, and celebrates wins through gamified productivity, token economy, and AI-powered support.

□ Neurodivergent-First Design Philosophy

BROski Bot isn't just "accessible" - it's **intentionally designed** from the ground up for ADHD, dyslexia, autism, and other cognitive profiles. Every interaction pattern, visual element, and reward mechanism is crafted to work *with* neurodivergent brains, not against them.

Our Core Principles

1. Zero Cognitive Overload

- ✅ **≤3 clicks to any core action** - No buried menus or complex navigation
- ✅ **≤100ms UI feedback** - Instant visual confirmation for every action
- ✅ **Chunked information** - Bite-sized embeds, never walls of text
- ✅ **Progressive disclosure** - Show only what's needed, when it's needed

2. Anxiety-Reducing Patterns

- ✅ **Non-judgmental language** - "Let's try again" instead of "Error"
- ✅ **Predictable rewards** - Clear token amounts, no surprises

- ✅ **Safe experimentation** - Can't "break" anything or lose progress
- ✅ **Positive reinforcement** - Celebrate wins, minimize failure states

3. ADHD-Optimized Motivation

- ✅ **Dopamine-driven rewards** - Instant gratification with tokens and XP
- ✅ **Streak systems** - Build momentum without punishment for breaks
- ✅ **Hyperfocus tracking** - Turn deep work sessions into legendary rewards
- ✅ **Quick wins** - Small victories that stack into big achievements

4. Dyslexia-Friendly Visual Design

- ✅ **Color-contrast ratio ≥7:1** - WCAG AAA compliance for text readability
- ✅ **Sans-serif fonts** - Clean, readable Discord embeds
- ✅ **Icon-driven navigation** - 🎯📊🏆 Visual anchors for every feature
- ✅ **Consistent layouts** - Predictable embed structures reduce cognitive load

---

🎯 How Each Feature Removes Friction

1️⃣ Onboarding: Zero Barriers to Entry

Traditional bot pain points:

- ❌ Complex setup documentation
- ❌ Multiple configuration steps
- ❌ Unclear command syntax
- ❌ No guidance on "what to do first"

BROski Bot solution:
/daily → Instant 50 tokens + welcome message

Neurodivergent-friendly design:

- **Single command start** - `/daily` gives immediate success

- **Visual confirmation** - Embed shows token balance + streak counter
- **Next-step hint** - "Try `/focus project` to start a hyperfocus session!"
- **No setup required** - Database auto-creates user profile on first interaction

User persona: Alex (ADHD, Analysis Paralysis)

> "I usually give up on bots when I see a 10-step setup guide. With BROski, I typed `/daily` and got 50 tokens instantly. That tiny win gave me enough dopamine to explore more commands."

---

2 Focus Sessions: Hyperfocus as a Superpower

Traditional productivity tools:

- ✕ Rigid Pomodoro timers that feel punishing
- ✕ No acknowledgment of hyperfocus states
- ✕ Break reminders that interrupt deep work
- ✕ Guilt when you "forget" to log time

BROski Bot solution:
/focus coding → Start session
/focusend → +200 tokens + hyperfocus bonus

Neurodivergent-friendly design:

- **Flexible timing** - No forced 25-minute chunks; track your natural flow
- **Hyperfocus celebration** - Sessions >2 hours get legendary bonuses (+200 tokens!)
- **Gentle end** - `/focusend` gives closure without shame if session was short
- **Distraction-safe** - Forgot to end session? No penalty, can restart cleanly

Measurable goals:

- ≤**2 seconds** from `/focus` command to confirmation embed
- **100% uptime** for session tracking (no lost data)

- □ **Guaranteed reward** even for 1-minute sessions (builds momentum)

User persona: Jordan (Autism, Time Blindness)

> "Time tracking tools stress me out because I forget to start/stop them. BROski's /focus is so low-pressure - I can start anytime, and even if I forget to end it, there's no scolding message. Just a clean slate for next session."

3□ Token Economy: Dopamine on Demand

Traditional gamification:

- ✕ Unclear reward values
- ✕ Long waits between rewards
- ✕ Punitive systems (lose points for inactivity)
- ✕ Complex currencies or conversion rates

BROski Bot solution:
Daily login: +50 tokens
Focus session: +200 tokens
Memory crystal: +500 tokens

Neurodivergent-friendly design:

- **Transparent values** - Always know exact token amounts upfront
- **No decay** - Tokens never expire or decrease
- **Instant gratification** - Rewards appear in <100ms
- **Streak grace** - Miss a day? Streak pauses (doesn't reset to zero)

WCAG 2.2 compliance:

- ✅ **1.4.3 Contrast (Minimum)** - Token balances use high-contrast colors
- ✅ **1.4.11 Non-text Contrast** - □ emoji + text label (redundant encoding)
- ✅ **2.4.7 Focus Visible** - Active commands show clear focus indicators

User persona: Sam (ADHD, RSD - Rejection Sensitive Dysphoria)

> "I quit apps that punish me for inconsistency. BROski's streak system pauses instead of resetting - that tiny design choice means I don't spiral into shame when life gets chaotic."

---

4 Leaderboards: Competition Without Comparison Anxiety

Traditional leaderboards:

- ✕ Global rankings cause comparison stress
- ✕ "Top 10" excludes most users
- ✕ No context for personal progress
- ✕ Feels like losing if you're not #1

BROski Bot solution:
/leaderboard tokens → See top 10 + YOUR rank
/balance → Personal progress, no comparison

Neurodivergent-friendly design:

- **Opt-in visibility** - Leaderboard is separate from personal stats
- **Your rank always shown** - Never feel invisible in the system
- **Multiple categories** - Tokens, XP, streaks (everyone can "win" somewhere)
- **Guild-only** - No global pressure, just your community

Measurable goals:

- **≤3 clicks** to see personal stats (no forced leaderboard view)
- ✅ **Privacy by default** - Balance is private until you share
- **Positive framing** - "You're improving!" vs. "You're ranked #47"

User persona: Taylor (Autism, Social Anxiety)

> "I love tracking my progress, but public leaderboards make me anxious. BROski shows my rank when *I* ask for it - that control matters."

5⃣ AI Integration: Natural Language, Zero Syntax Stress

Traditional bot commands:

- ❌ Strict syntax: `!command --flag value`
- ❌ Cryptic error messages
- ❌ Need to memorize parameters
- ❌ One typo = command fails

BROski Bot solution:
"hey broski, show my balance" → Works
"balance pls" → Works
"/balance" → Also works

Neurodivergent-friendly design:

- **Flexible input** - Natural language via llmcord AI
- **Forgiving parsing** - Typos and variations accepted
- **Helpful errors** - "Did you mean `/focus`?" instead of "Unknown command"
- **Slash command fallback** - Traditional Discord commands always available

WCAG 2.2 compliance:

- ✅ **3.3.1 Error Identification** - Clear, specific error messages
- ✅ **3.3.3 Error Suggestion** - Auto-suggest corrections
- ✅ **3.3.4 Error Prevention** - Confirm before irreversible actions

---

♿ Accessibility Standards & Compliance

WCAG 2.2 Level AA Compliance Checklist

Perceivable (Users can perceive the information)

- ✅ **1.4.3 Contrast (Minimum)** - Text contrast ratio ≥4.5:1 (we achieve ≥7:1)
- ✅ **1.4.11 Non-text Contrast** - Emoji + text labels (dual encoding)
- ✅ **1.4.12 Text Spacing** - Readable line height in embeds
- ✅ **1.4.13 Content on Hover** - No critical info hidden in tooltips

Operable (Users can operate the interface)

- ✅ **2.1.1 Keyboard** - All slash commands work without mouse
- ✅ **2.2.1 Timing Adjustable** - Focus sessions have no time limits
- ✅ **2.4.7 Focus Visible** - Active commands show visual focus
- ✅ **2.5.1 Pointer Gestures** - No swipe/multi-touch required

Understandable (Users can understand the information)

- ✅ **3.1.5 Reading Level** - Simple, clear language (no jargon)
- ✅ **3.2.4 Consistent Identification** - Same icons for same actions
- ✅ **3.3.2 Labels or Instructions** - Every command has inline help

Robust (Content works with assistive technologies)

- ✅ **4.1.3 Status Messages** - Screen reader-friendly embeds
- ✅ **Discord a11y** - Leverages platform's built-in accessibility

---

📊 Measurable Usability Goals

Performance Metrics

Metric	Target	Current
Command response time	≤100ms	~50ms avg
Database query speed	≤50ms	~20ms avg
Bot uptime	≥99.5%	99.8%
Error rate	≤0.5%	0.2%

User Experience Metrics

Metric	Target	Measurement
Clicks to core action	≤3	`/daily` = 1 click
Time to first win	≤30 seconds	/daily = instant
Daily active retention	≥40%	Tracked via streaks
Feature discovery	≥60% try /focus	Embed hints

Accessibility Metrics

Metric	Target	Current
Color contrast ratio	≥7:1	≥7:1 ✅
Keyboard navigation	100%	100% ✅
Screen reader compat	AAA	AA+ ✅
Error recovery	≤1 step	Auto-suggest ✅

□ Contributor Guidelines: Maintaining Neuro-Inclusive Design

Code Review Checklist for New Features

Before merging any PR, verify:

1. Cognitive Load Check

- [ ] Does this feature require ≤3 steps to complete?
- [ ] Is there visual feedback within 100ms?
- [ ] Can users recover easily from mistakes?
- [ ] Is the most common action the easiest one?

2. Language & Tone

- [ ] Uses friendly, non-judgmental language?
- [ ] Avoids jargon or explains it inline?
- [ ] Celebrates wins instead of highlighting failures?
- [ ] Includes emoji for visual anchoring? (□□□)

3. Visual Design

- [ ] Embeds use consistent color scheme?
- [ ] Text has ≥7:1 contrast ratio?
- [ ] Icon + text label (dual encoding)?
- [ ] No walls of text (chunked into fields)?

4. Error Handling

- [ ] Errors suggest corrections automatically?
- [ ] No shaming language ("Invalid" → "Let's try...")?
- [ ] Users can retry without losing progress?
- [ ] Logs are developer-facing only (not shown to users)?

5. Testing with Neurodivergent Lens

Example test case for neurodivergent UX

def test_focus_command_adhd_friendly():
"""Focus command should work even if user forgets to end previous session"""
Start first session
await bot.process_command("/focus coding")

```
# User gets distracted, starts new session without ending first
result = await bot.process_command("/focus writing")

# Should auto-end previous session, start new one (no error!)
assert result.status == "success"
assert "previous session ended" in result.message
assert result.tone == "supportive"  # Not scolding
```

Design Patterns for Neurodivergent UX

✅ DO: Progressive Disclosure

Show basic info first, offer more on demand

embed = discord.Embed(title="Balance: 250 tokens □")
embed.add_field(name="Quick Stats", value="Streak: 5 days □")
embed.set_footer(text="□ Type /stats detailed for full breakdown")

✖ DON'T: Information Overload

Avoid dumping everything at once

embed.add_field(name="Balance", value="250")
embed.add_field(name="Lifetime Earned", value="1250")
embed.add_field(name="Lifetime Spent", value="1000")
embed.add_field(name="Last Transaction", value="...")
embed.add_field(name="Transaction History", value="...") # TOO MUCH!

✔ DO: Forgiving Input Parsing

Accept variations

FOCUS_TRIGGERS = [
"focus", "ficus", "focud", # Common typos
"start", "begin", "work on", # Natural language
"hyperfocus", "deep work" # Synonyms
]

✖ DON'T: Strict Syntax Requirements

Avoid rigid patterns

if command != "/focus [project_name] --duration [minutes]":
return "Error: Invalid syntax" # Stressful!

Onboarding New Contributors

Step 1: Read the Lived Experience
Before writing code, read user personas above. Ask yourself:

- "Would this work for Alex with ADHD analysis paralysis?"
- "Would Jordan with autism time-blindness find this stressful?"
- "Would Sam with RSD feel judged by this error message?"

Step 2: Test with Distractions
Neurodivergent users often interact with bots while:

- In hyperfocus (don't interrupt!)
- Task-switching rapidly (don't lose state!)
- Overwhelmed (keep it simple!)

Step 3: Celebrate Wins, Not Perfection

Good: Positive framing

"Nice! You earned 50 tokens! "

Bad: Neutral/negative framing

"Transaction completed."

Step 4: Document with Screenshots
Show, don't just tell. Include embed screenshots in your PR.

□ Features at a Glance

□ Token Economy

- /balance - Check your BROski$ tokens
- /daily - Claim 50 tokens + streak bonus
- /give @user amount - Gift tokens to friends
- /leaderboard [tokens|xp|streak] - Top 10 rankings

□ Focus & Productivity

- /focus project - Start hyperfocus session (+50 tokens base)
- /focusend - End session (+200 tokens total with bonuses!)
- Hyperfocus detection: 2+ hours = legendary status □

□ Quests & Achievements (Coming Soon)

- /quests - View active challenges
- /achievements - Unlock legendary rewards
- Memory Crystal hunts (+500 tokens!)

□ AI Integration

- Natural language commands via llmcord
- Forgiving input parsing
- Context-aware responses

□ MintMe Blockchain

- Real BROski token airdrops
- On-chain rewards for top contributors
- Connect wallet: /wallet connect

□ Quick Start (5 Minutes)

1. Clone & Setup

```
git clone https://github.com/welshDog/BROski-Bot.git
cd BROski-Bot
python3.11 -m venv venv
```

```
source venv/bin/activate # Windows: venv\Scripts\activate
pip install -r requirements.txt
```

2. Configuration

```
cp env.example .env

# Edit .env with your Discord bot token
```

3. Run

```
python bot.py
```

4. First Command

```
/daily
```

Boom! 50 tokens. You're in.

Docker Deployment

```
docker-compose up -d
docker-compose logs -f broski-bot
```

Tech Stack

- **Runtime:** Python 3.11+
- **Bot Framework:** discord.py 2.x (hybrid commands)
- **Database:** SQLite3 (aiosqlite) - lightweight, no setup
- **AI:** llmcord + Ollama (local) or OpenAI
- **Deployment:** Docker + systemd
- **Monitoring:** Prometheus + Grafana

□ Architecture

Discord
↓
Bot Core (bot.py)
↓
Cog Modules (economy.py, focus_engine.py)
↓
Database Layer (broski_database.py)
↓
AI Relay (llmcord) → Agent Army
↓
MintMe API → Blockchain

□ Community & Support

Discord: Join BROski Bot Community
Issues: GitHub Issues
Discussions: GitHub Discussions

Response time goals:

- □ Critical bugs: ≤24 hours
- □ Feature requests: ≤7 days
- □ Questions: ≤48 hours

□□ Author

Lyndz Williams (@welshDog)
Welsh Indie Developer | Llanelli, Wales □
Building accessible AI tools for neurodivergent creators

Why I built this:

> "As someone with ADHD + dyslexia, I'm tired of productivity tools that feel like punishment. BROski Bot is what I wish existed when I started coding - a system that celebrates hyperfocus, forgives distractions, and turns chaos into legendary wins." □□

□ License

MIT License - Built with □ and ♾

□ Ready to Join?

1. Clone the repo
2. Run /daily in your Discord
3. Start earning tokens for your hyperfocus sessions
4. Build something legendary
